**Tables:**

**Table S1.** Individual pH and EC values in studied urban soils.

**Table S2.** Individual values of element concentrations ( $\text{mg kg}^{-1}$  d.w.) in *Tilia* sp. leaves and urban soils (i.e. polluted and unpolluted sites in Belgrade and Reading). BP and RP represent polluted, while BU and RU represent unpolluted sampling sites.

**Table S3.** Bioaccumulation factor (BAC) for PTEs in *Tilia* sp. at selected sampling sites (i.e. polluted and unpolluted sites in Belgrade and Reading). BP and RP represent polluted, while BU and RU represent unpolluted sampling sites. Levels  $> 1$  are denoted in bold.

**Table S4.** Correlation matrix for selected PTEs concentrations in leaves and corresponding soil samples at selected sampling sites (i.e. polluted and unpolluted sites in Belgrade and Reading). BP and RP represent polluted, while BU and RU represent unpolluted sampling sites.

**Table S5.** The results of PCA (Varimax normalized) for selected soil samples and *Tilia* sp.

**Table S1.** Individual pH and EC values in studied urban soils.
