Table S1 Details of the simulation. Λ is the total integration time, N the number of trajectories, E_v , the initial excess vibrational energy, $\langle K \rangle^{SP}$ the average kinetic energy of the starting point state and their corresponding standard deviations $\sigma_{\langle K \rangle}$. T^{SP} corresponds to the temperature computed from $\langle K \rangle^{SP}$.

	Λ	N	E_v	$\langle K \rangle^{SP}$ kcal/mol	$\sigma_{\langle K \rangle}$	T^{SP} K
