Multifunctional Properties of a *Bacillus thuringiensis* Strain (BST-122): Beyond the Parasporal Crystal

Argine Unzue, Carlos J. Caballero, Maite Villanueva, Ana Beatriz Fernández and Primitivo Caballero

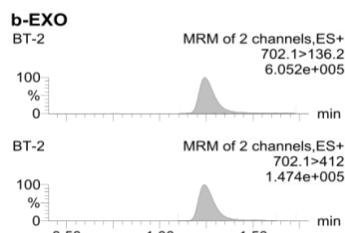

A

Compound name: b-EXO
Correlation coefficient: $r = 0.993281$, $r^2 = 0.986608$
Calibration curve: $1032.88 * x + 18238.3$
Response type: External Std, Area
Curve type: Linear, Origin: Exclude, Weighting: $1/x$, Axis trans: None

Figure S1. Results of HPLC analysis for detection of production of type I β -exotoxin (thuringiensin). (A): Calibration curve of HPLC analysis, * multiplication symbol; (B): HD-2 strain standard results (positive control); (C): BST-122 results.

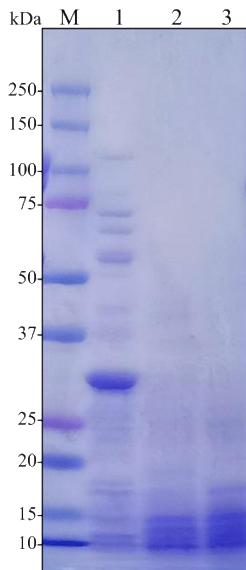

Figure S2. SDS-PAGE from BST-122 strain. M: protein weight marker (kDa); 1: spores and crystal mixture; 2: solubilized in carbonate buffer (pH 11.3); 3: solubilized protein dialyzed in HEPES (pH 8.0).

Table S1. Mean lethal concentration (LC_{50}) value of the BST-122 solubilized protein crystals for J2 *M. incognita* individuals.

LC	Concentration ($\mu\text{g/ml}$)	Lower limits	Upper limits	χ^2	df	Slope	SE slope	Intercept
LC_{50}	458	276	11711	24.0	6	1.37	0.224	-3.64

LC: lethal concentration; χ^2 : chi-square; df: degree of freedom; SE: standard error.

Table S2. Mortality percentages of J2 *M. incognita* individuals treated with Cry5_orf65 solubilized protein crystals.

Treatment	Concentration ($\mu\text{g/ml}$)	Mortality (%) Mean \pm SE
Control (HEPES)	0	14.5 \pm 5.2 a
BMB171-pSTAB-empty	50	37.7 \pm 2.9 a
	150	97.1 \pm 2.9 b
BMB171-Cry5_orf65	50	50.7 \pm 20.4 ab
	150	86.9 \pm 2.5 b

SE: Standard Error. Different letters were used to denote statistical significance between values. Kruskal-Wallis ($\chi^2 = 11.552$, df = 4, $p = 0.02101$), Bonferroni test (p -value <0.05).

Table S3. Insecticidal protein content of *Bacillus thuringiensis* BMB171.
