

Figure S1: Bar plots indicating measures of cyanobacterial abundance grouped by location through time. A: Chlorophyll a concentration. B: Phycocyanin concentration. C: Microcystis counts.

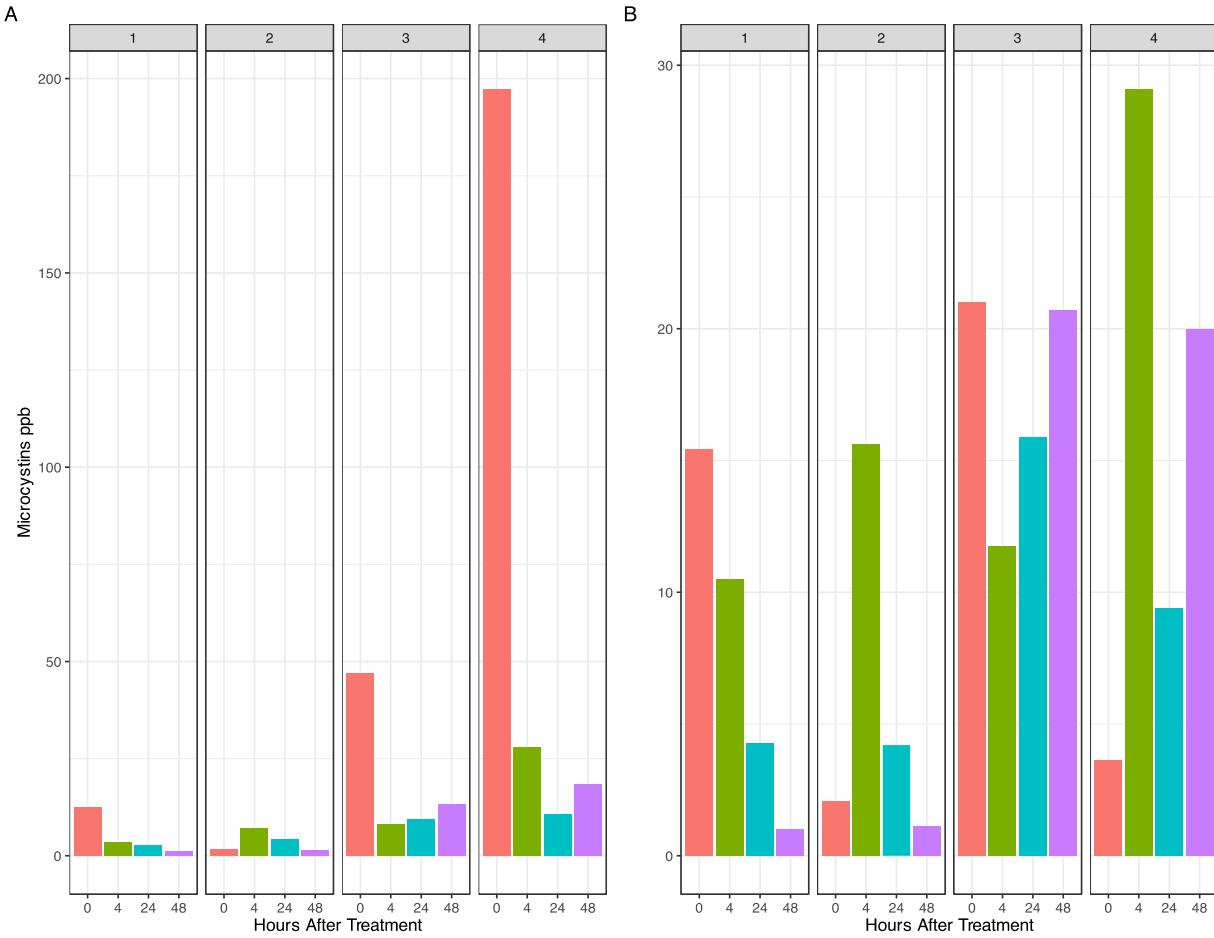

Figure S2: Bar plots indicating microcystin concentration through time. (A) Total microcystins (B) Aqueous microcystins.

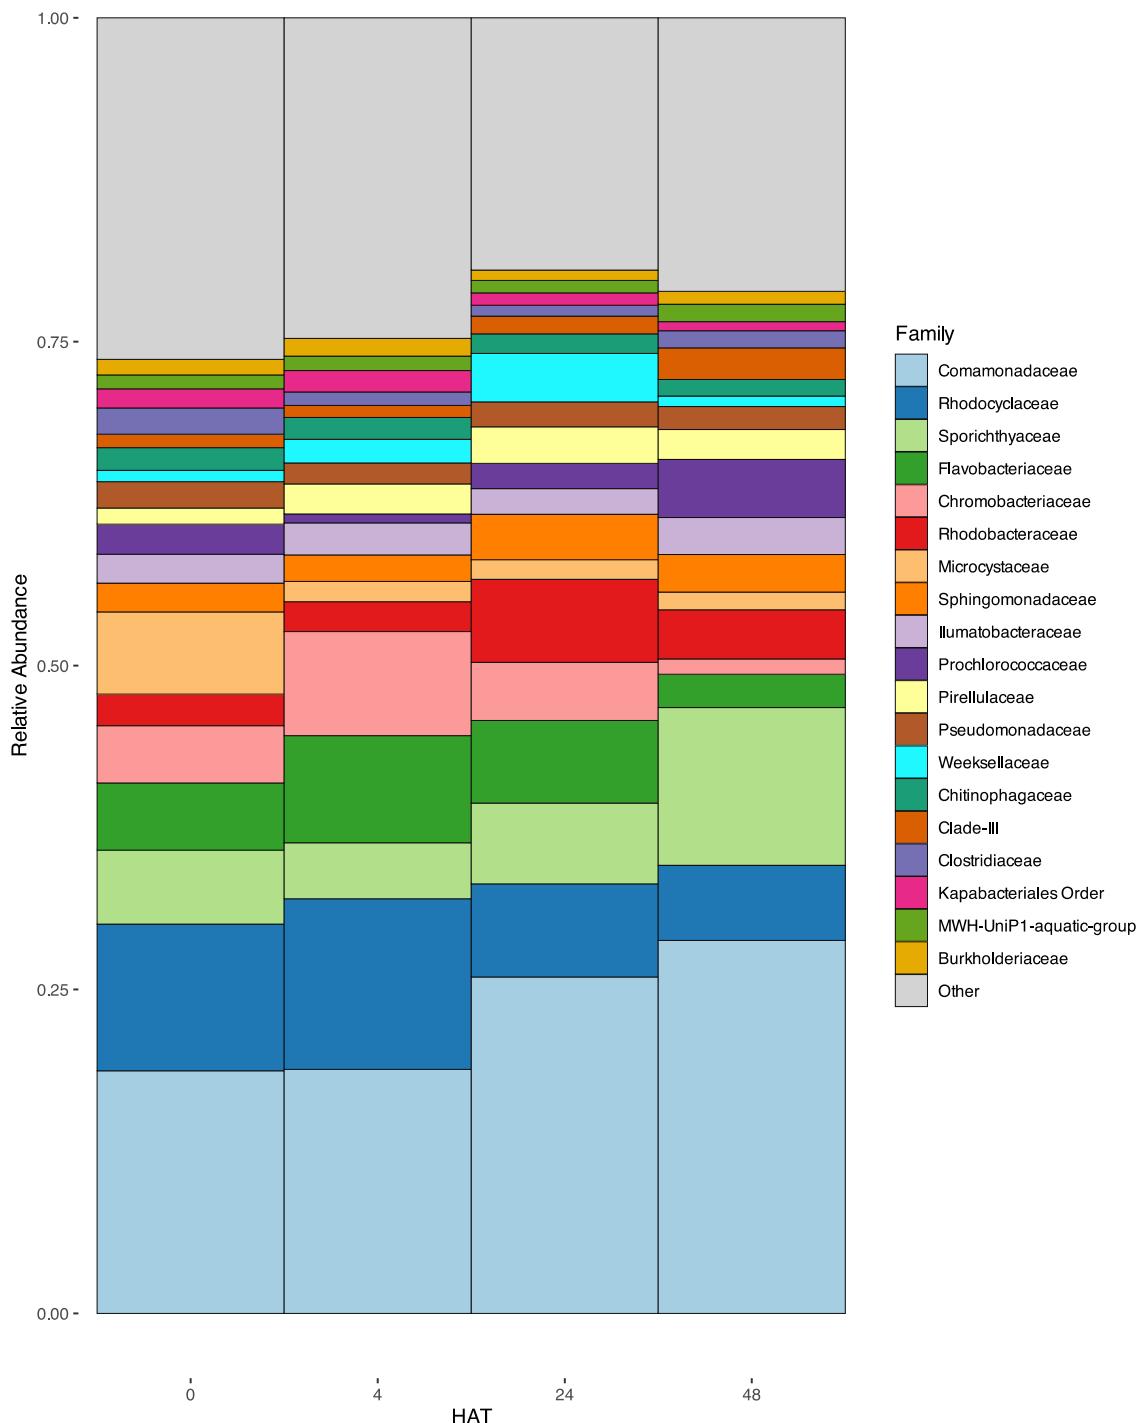

Figure S3: Bar plots of the relative abundance of the top 20 more abundant bacterial families found during the study, grouped by hours after treatment.
