

**Fig S1. Defensins with anti-SARS-CoV2 activity are not cytotoxic.** hACE2-expressing HEK293T cells were treated for 24 hours with the indicated concentration of HNP1 (A), HD5 (B), HD6 (C), and RC101 (D). Cell viability was determined by MTS-based CellTiter 96® AQueous One Solution Cell Proliferation Assay. Data are mean ± SD of 4-6 samples, and are representative of two independent experiments.
