Figure S1. Immunohistochemistry control tissues of lyssavirus RT-PCR negative serotine bats (*Eptesicus serotinus*). (a) Serial sectioned of eye as per Figure 2.a with mouse IgG control. (b) Section of tongue from a lyssavirus negative serotine bat stained with 512B lyssavirus IHC. No non-specific labelling was detected in either control stained sections. Images taken at 200x.

Table S1. Sanger derived sequences for the seven EBLV-1 infected serotine bats (*E. serotinus*) detected in the UK between 2018 and 2021. Sequence for 762-18 deposited on Genbank accession number: MZ821029.
