

**Figure S1.** Purification and determination of starch content in leaves. **(A)** A schematic diagram detailing the procedure for the quantification of starch content in leaves. **(B)** The series of concentration of tapioca flour solutions (0, 0.1, 0.2, 0.4, 0.6, 0.8, 1.0 mg/ml water) were stained with iodine described in (A). **(C)** Calibration graph of absorbance at 560 nm against concentration (mg/ml) of tapioca flour solutions described in (B), the linear regression equation  $Y$  (starch concentration, mg/ml) =  $0.412X$  (absorbance) – 0.06 (correlation coefficient,  $R^2 = 0.9991$ ).

Table S1. Primers were used in this study.

Primer Name	Oligonucleotide sequence (5'- 3')	GenBank Accession Number	Size of PCR product
