A. RBSDV detection

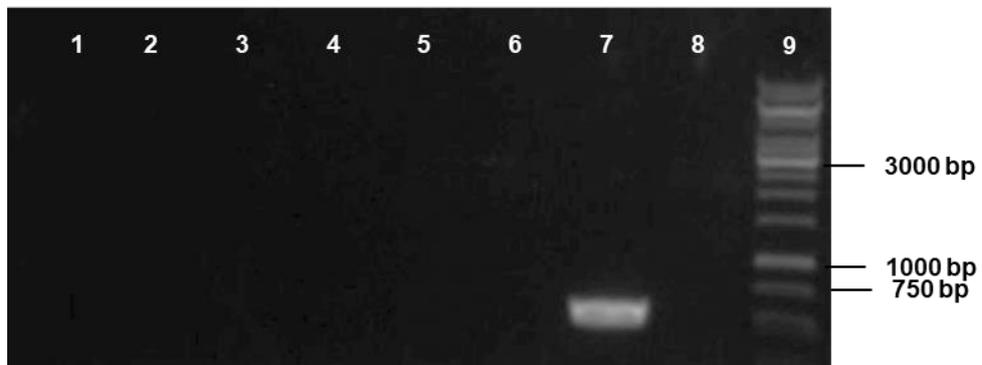

B. SRBSDV detection

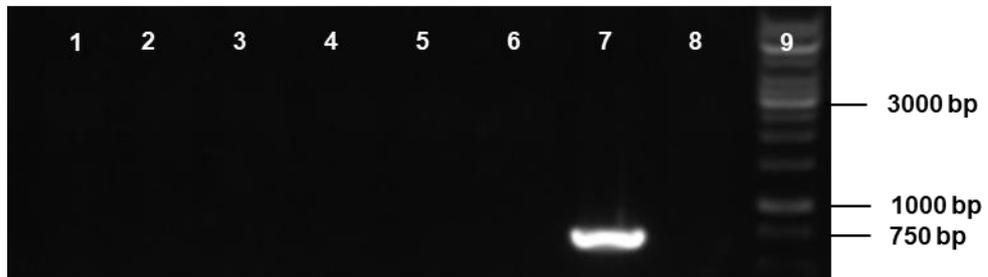

C. RSMV detection

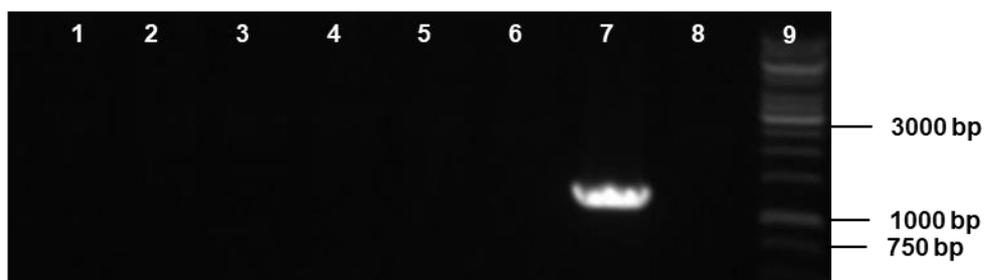

D. RSV detection

E. RDV detection

F. RGDV detection

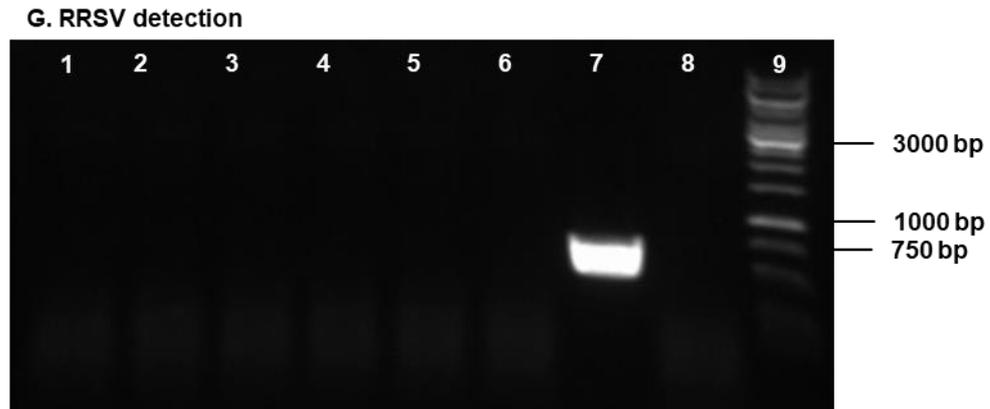

Figure S1. RT-PCR detecting RBSDV (A), SRBSDV (B), RSMV (C) RSV (D), RDV (E), RGDV (F) and RRSV (G) in field-collected rice plants.

Lanes 1-6 were field-collected rice plants as shown in Figure 1A. Lanes 7 and 8 were rice plants infected by the virus and uninfected rice plants, using as positive and negative controls. Lane 9 was a 1 kb DNA marker.

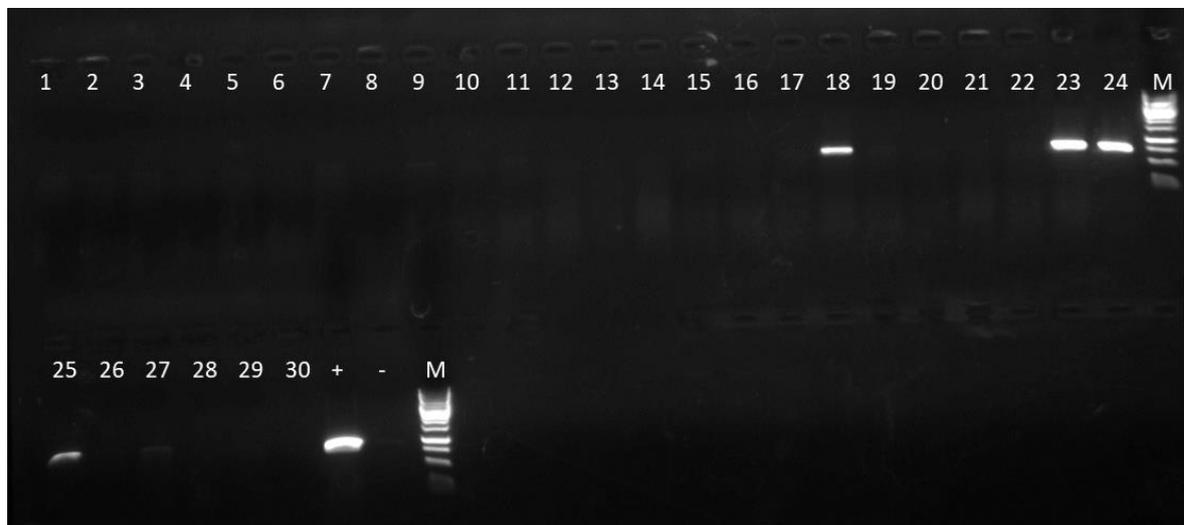

Figure S2. RT-PCR detecting RDaBV in field-collected rice plants.

Lanes 1-30 were 30 rice plant samples collected from paddy fields in Zhejiang Province of China in 2021. + was a RDaBV-infected rice plant. - was an uninfected rice plant. M was a 1 kb DNA marker.
