

## Supplementary Materials

**Supplementary Figure S1. Screening of kinase inhibitors against SARS-CoV-2.** (a) Compounds were prediluted in medium and added onto Caco-2 cells (final conc. 1  $\mu$ M). Additionally, a titration series of the control inhibitor remdesivir was applied. Then, cells were infected with SARS-CoV-2 Alpha at a MOI of 0.0005. Two days later, infection was quantified by an in-cell ELISA which enzymatically quantifies nucleocapsid protein. Values were corrected for the background signal derived from uninfected cells and untreated controls were set to 100% infection. (b) In parallel, a viability assay was performed under conditions corresponding to the respective infection assay. After two days, metabolic activity of the cells was analyzed using the CellTiter-Glo® Luminescent Cell Viability Assay. Untreated controls were set to 100% viability. Shown are means  $\pm$  SD from one experiment in triplicates.

**Supplementary Figure S2. SB431542 is cytotoxic at concentrations higher than 25  $\mu$ M.** Calu-3 cells were treated with SB431542. Metabolic activity was determined two days post infection by CellTiterGlo assay. Values were normalized to untreated controls. Data are derived from one experiment performed in triplicates and represent are mean values  $\pm$  SD. Dotted line indicates highest concentration used in infection experiments (see Figure 7).

**Supplementary Table S1: List of kinase inhibitors and corresponding targets used for screening**

#	Inhibitor	Target
1	TG003	CLK1 CLK4
2	PKC 412	Multiple Kinases
3	Doramapimod	p38 MAPK
4	Erlotinib	EGFR
5	PLX4032	B-RAF B-RAV600E
6	Phthalazinone pyrazole	Aurora A
7	AG-879	BMX
8	Torin 1	mTOR
9	BIBF 1120	FGFR PDGFR VEGFR
10	SMI-4a	PIMs
11	AS-703026	MEK1 MEK2
12	Chelerythrine (chloride)	PKC
13	R406	Syk
14	AZD 7762	Chk1 Chk2
15	Dasatinib	Abl LCK Src
16	GSK1059615	PI3K $\alpha$
17	Ruxolitinib	JAK1 JAK2
18	Necrostatin-1	RIPK1
19	INK128	mTOR
20	Bosutinib	Abl EPHB2 Src
21	Canertinib (hydrochloride)	EGFR
