

## Supplementary Figures

**Supplementary Figure S1.** Kinetics of the intracellular bacilli survival and rBCG-LTAK63 stability in M1 and M2 macrophages infection. M1 and M2 macrophages from 4-7 different donors were infected with rBCG-LTAK63 or BCG (MOI 10). (A) The intracellular bacteria were recovered 1 h, 24 h or 48 h after infection. (B) The bacteria recovered from the macrophages infected with rBCG-LTAK63 was plated in 7H10 with kanamycin or without kanamycin.

**Supplementary Figure S2.** Genes analyzed by dcRT-MLPA and their predominant functions.
