

Supplementary Table S1: Calves enrolled in each treatment group for the years analyzed in this study.

	Autogenous	Commercial	Sham	Total
2017	68	73	71	212
2019	76	64	72	212
2020	85	85	78	248

Supplementary Table S2: Sequence of rPilA antigen and negative control scrambled peptide antigen used in this study.

Antigen	Amino Acid Sequence
Recombinant full length PilA (rPilA)	MNAQKGFTLIELMIVAIIGILAAIALPAYQ DYISKSQTTRVVGELAAGKTAVDAALFEG KTPKLGKAANDTEEDIGLTGGTARSNL MSSVNIGGGAFATGAGTLEATLGNRANKD IAGAVITQSRDAEGVWTCTINGSAAPGWK SKFVPTGCKEH
Scrambled peptide	NLWGEANPNNGNGCSAQALSGLQPAQMT KVGDTKCSLT

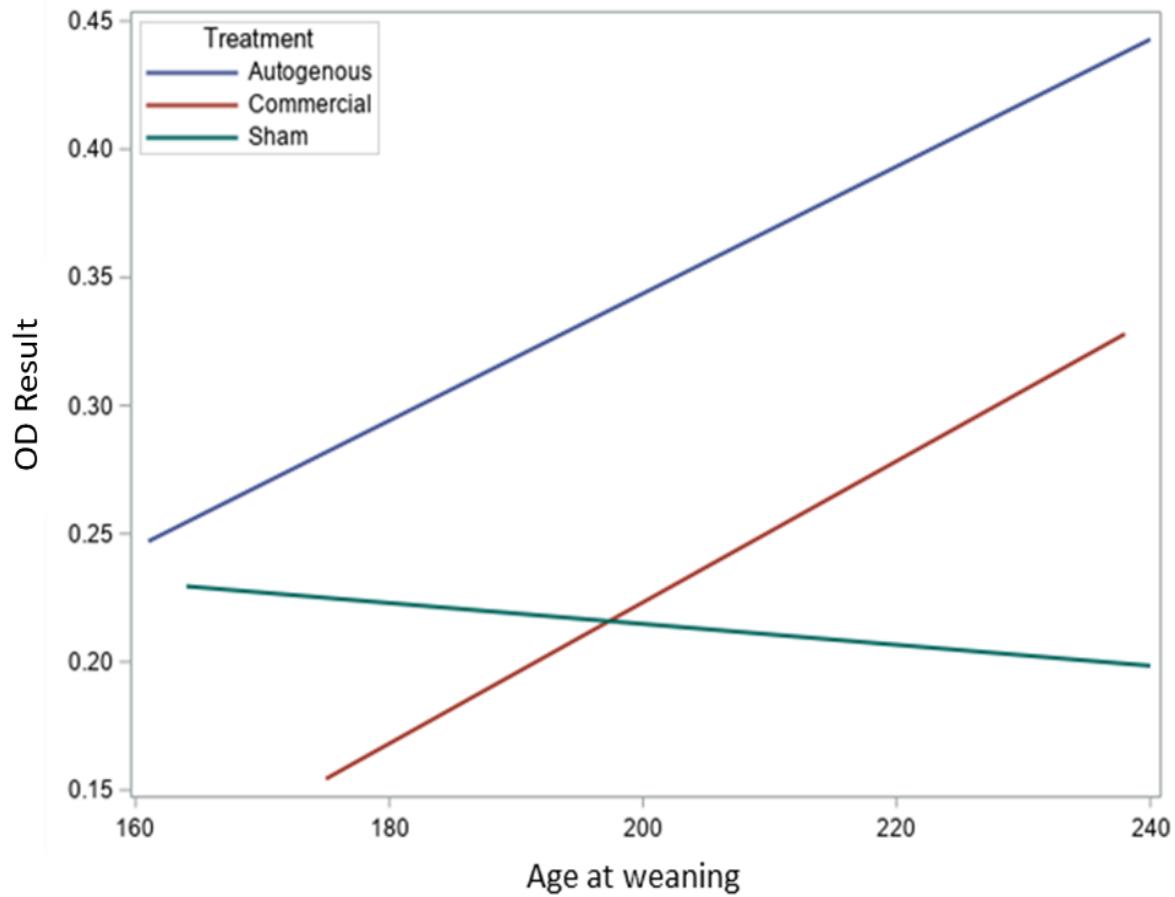

Supplementary Table S3: Predicted probability of IBK development (Mean x 100%) for each combination of treatment, management group, and sex.

Phenotype combination	Estimate	Standard Error	Mean	SEM
Autogenous Black Angus Heifer	-1.7993	0.2993	0.1419	0.03646
Autogenous Black Angus Bull	-1.5722	0.2927	0.1719	0.04166

Effect of calf age on rPilA ELISA

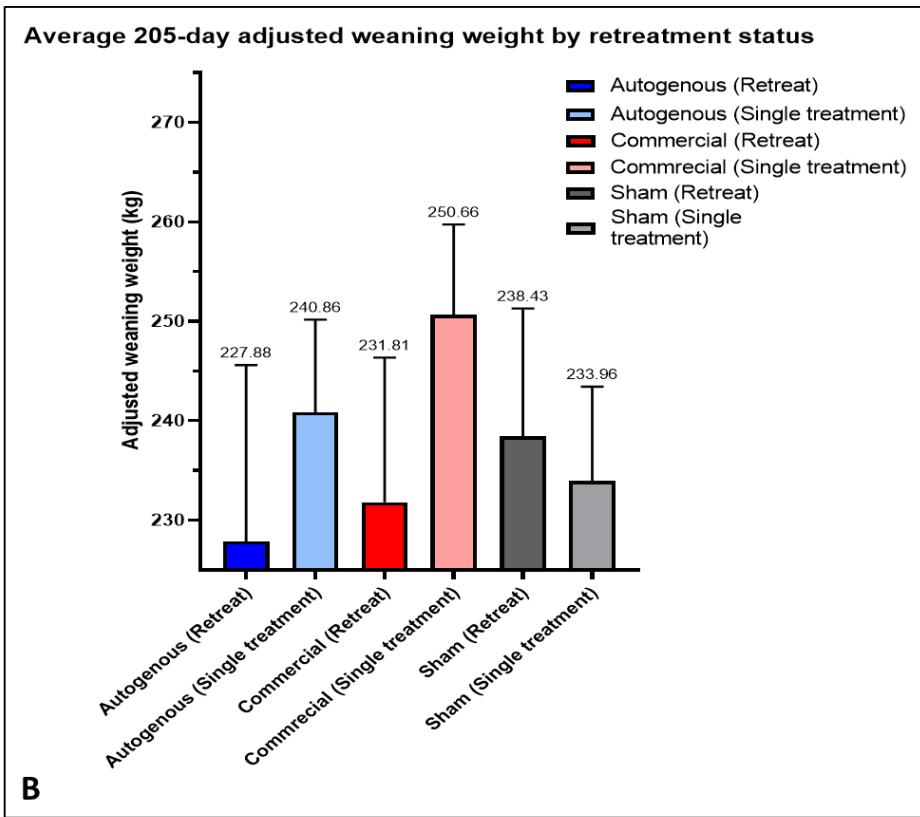

Supplementary Figure S1: ELISA OD result to the rPilA antigen by calf age and treatment. Age had an effect on antibody levels ($P = 0.005$).

Average 205-day adjusted weaning weight by treatment and IBK diagnosis

A

Supplementary Figure S2: Average 205-day adjusted weaning weight (in kg) by treatment group and IBK diagnosis (**A**). Autogenous: IBK: 239.70, No IBK: 243.88, Commercial: IBK: 247.36, No IBK: 242.58, Sham: IBK: 236.70, No IBK: 244.03. (IBK effect P = 0.33). Average 205 day adjusted weaning weight by treatment group and retreatment status (**B**). Autogenous: Retreatment: 227.88, Single treatment: 240.86, Commercial: Retreatment: 231.81, Single treatment: 250.66, Sham: Retreatment: 238.43, Single treatment: 233.96. (P for retreatment effect = 0.06).
