¹Not antigen-specific

²peptides not suitable as target peptide based on intensity

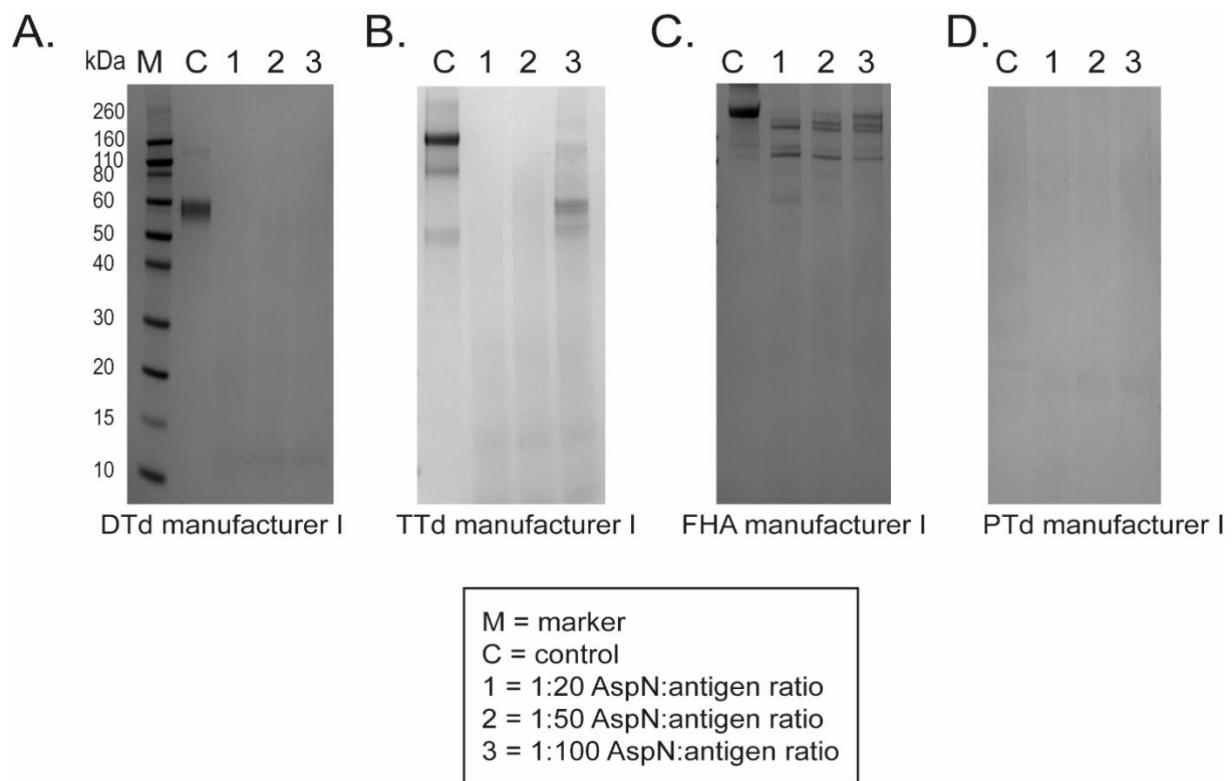

Figure S1. SDS-PAGE results digestion of DTd, TTd, FHA and PTd using different enzyme-to-substrate ratios. Non-adjuvanted samples of individual DTd (A.), TTd (B.), FHA (C.) and PTd (D.) antigens were analyzed.

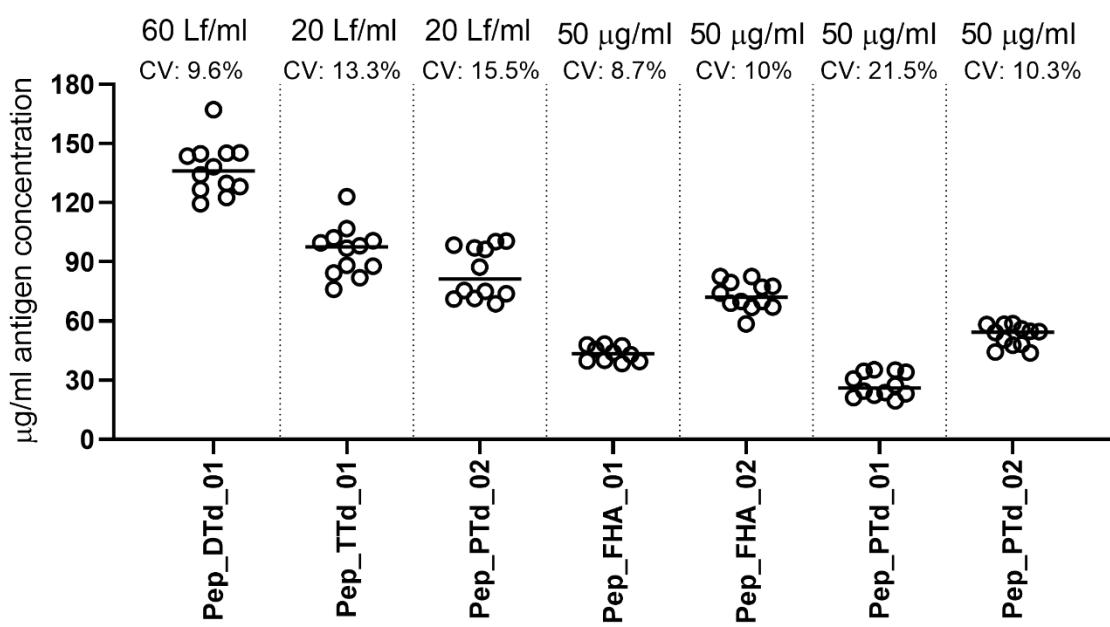

Figure S2. Quantification of antigens in a second batch of DTaP vaccine. The used signature peptides are shown on the X-axis and the antigen concentrations are plotted on the Y-axis. To determine the amount of antigen present in vaccine A batch 2, 100 pmol of each internal standard peptide was added to 100 µl vaccine and digested with 0.33 µg Asp-N (n=12 per signature peptide, except for peptide 4, n=10).
