SUPPLEMENTARY MATERIALS

Supplementary Figure S1. Gating strategy of RBD-specific B cells

Flow cytometric characterization of SARS-CoV-2 RBD-specific B cells in peripheral blood mononuclear cells (PBMCs) isolated from SARS-CoV-2 naïve healthy adults immediately before and 28 days after the second dose of the mRNA BNT162b2 vaccine. RBD-stained (**A**) and negative control samples (**B**) are presented from the PBMCs of one of the study participants.
