

## Supplementary Materials

**Table S1.**

Table S1: Mediation Model Estimates with Missingness Including Direct and Indirect Effects			
	Path	Estimate	95% Bootstrapped Confidence Intervals
Missingness (Yes = 1; No = 0)	<b>Mediator ==&gt; Vaccination</b>		
	Missingness ==> Vaccination	-0.07	-0.75, 0.88
Health literacy (continuous)	<b>Direct effects</b>		
	Health literacy ==> Vaccination	0.00	-0.04, 0.04
Vaccine confidence (aVCI, continuous)	<b>Mediator ==&gt; Vaccination</b>		
	aVCI ==> Vaccination	0.87*	0.42, 1.58
	<b>Mediator ==&gt; Health literacy</b>		
	aVCI ==> Health literacy	0.04*	0.03, 0.06
	<b>Indirect effects on Vaccination</b>		
	Health literacy ==> aVCI ==> Vaccination	0.04*	0.02, 0.08

Table S1. Note. aVCI = Adapted Vaccine Confidence Index; Estimates are unstandardized. Starred (\*) estimates indicate 95% confidence intervals not containing zero; Vaccine confidence is the mediator.
