Special Issue Reprint

Novel Methods and Applications for Mineral Exploration

Edited By:
Paul Alexandre
mdpi.com/books/pdfview/book/2287

ISBN 978-3-03928-943-1 (Pbk)
ISBN 978-3-03928-944-8 (PDF)

This special volume offers a snapshot of the latest developments in mineral exploration, in particular, geophysical, geochemical, and computational methods. It reflects the cutting-edge applications of geophysics and geochemistry, as well as novel technologies, such as in artificial intelligence and hyperspectral exploration, methods that have profoundly changed how exploration is conducted. This special volume is a representation of these cutting-edge and pioneering methods to consider and conduct exploration, and should serve both as a valuable compendium of the most innovative exploration methodologies available and as a foreshadowing of the form of future exploration. As such, this volume is of significant importance and would be useful to any exploration geologist and company.
