Message from the Guest Editors

Dear Colleagues,

This Special Issue aims to bring together researchers from various fields of study. Researchers involved in single-discipline, inter-disciplinary and multi-disciplinary studies are welcome to submit a paper for peer review. Studies that address academic and industrial cybersecurity problems, and that provide insights into how cybersecurity threats can be dealt with, are welcome, as are papers that address current and future issues and challenges, and explain how managers and policymakers in both the private sector and the public sector deal with specific issues. A key focus of this Special Issue is to show how researchers are studying the complexities associated with various cyber attacks and how frameworks, models and concepts can be used to provide better intelligence so that the organization can be made more resilient.

This Special Issue will complement the existing literature and broaden our knowledge by placing cybersecurity within a wider context. The papers submitted are expected to cover a number of academic fields and link concepts and models with management applications and government policy.
