submissions:

15 November 2021

Message from the Guest Editors

Dear Colleagues,

The Special Issue aims to bring together researchers from various fields of study, across academia and industry, to provide insights into the cybersecurity issues and challenges that managers within organizations and policymakers are generally confronted with. A key focus of the Special Issue will be to show how researchers are investigating the various forms of cyber threats that exist and how they are deriving solutions to current and unexpected acts of cybercrime. It is envisaged that a range of papers will be forthcoming that cover various perspectives of the topic. Of interest is a mix of theoretical and applied papers outlining current knowledge and offering unique solutions or interpretations of the subject matter; alternatively, critique based on the facts established would be appreciated.

The Special Issue will complement the existing literature and broaden our knowledge by placing cybersecurity within a wider context. The papers submitted are expected to cover a number of academic fields and link concepts and models with management applications and government policy.
