

## Special Issue

# Big Data Analytics for Cultural Heritage 2nd Edition

### Message from the Guest Editors

Following the success of the Special Issue of Big Data and Cognitive Computing on “Big Data Analytics for Cultural Heritage”, we are delighted to announce the 2nd Edition”.

Although big data was initially coined as a term to represent our inability to manage and process the volumes of data that we record, recent advances in both the technological and algorithmic frontier have led to the development of the field of big data analytics. Cultural heritage, on the other hand, is a domain that produces vast amounts of data but also where the meaning of the data is crucially important in its handling.

In this Special Issue, we focus on big data analytics methods and tools that have been specifically developed for the domain of cultural heritage, as well as on experiences from the adaptation and/or application of general-purpose solutions to the domain of cultural heritage. The aim is to gather solutions, but also lessons learnt, methodologies, and good practices, that researchers and practitioners can use as a basis for their own work in the domain.

---

### Guest Editors

Dr. Manolis Wallace

Dr. Vassilis Pouloupoulos

Dr. Angeliki Antoniou

Dr. Martín López-Nores

---

### Deadline for manuscript submissions

closed (30 November 2024)

## About the Journal

### Message from the Editor-in-Chief

*Big Data and Cognitive Computing (BDCC)* is a scholarly online journal which provides a platform for big data theories with emerging technologies on smart clouds and exploring supercomputers with new cognitive applications. It is a peer-reviewed, open access journal that publishes high quality original articles, reviews and short communications. The primary aims of this journal are to encourage contributions of high quality scientific papers relating to data management and analytics in industry, such as manufacturing, healthcare, education, media and business, data mining, and cognitive science. There is no restriction on the maximum length of the papers.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, ESCI (Web of Science), dblp, Inspec, Ei Compendex, and other databases.

#### Journal Rank:

JCR - Q1 (Computer Science, Theory and Methods) /  
CiteScore - Q1 (Computer Science Applications)
