Special Issue

Cybersecurity, Threat Analysis and the Management of Risk

Message from the Guest Editors

The Special Issue aims to bring together researchers from various fields of study, across academia and industry, to provide insights into the cybersecurity issues and challenges that managers within organizations and policymakers are generally confronted with. A key focus of the Special Issue will be to show how researchers are investigating the various forms of cyber threats that exist and how they are deriving solutions to current and unexpected acts of cybercrime. It is envisaged that a range of papers will be forthcoming that cover various perspectives of the topic. Of interest is a mix of theoretical and applied papers outlining current knowledge and offering unique solutions or interpretations of the subject matter; alternatively, critique based on the facts established would be appreciated.

The Special Issue will complement the existing literature and broaden our knowledge by placing cybersecurity within a wider context. The papers submitted are expected to cover a number of academic fields and link concepts and models with management applications and government policy.

About the Journal

Message from the Editor-in-Chief

Big Data and Cognitive Computing (BDCC) is a scholarly online journal which provides a platform for big data theories with emerging technologies on smart clouds and exploring supercomputers with new cognitive applications. It is a peer-reviewed, open access journal that publishes high quality original articles, reviews and short communications. The primary aims of this journal are to encourage contributions of high quality scientific papers relating to data management and analytics in industry, such as manufacturing, healthcare, education, media and business, data mining, and cognitive science. There is no restriction on the maximum length of the papers.

Editor-in-Chief

Prof. Dr. Min Chen
School of Computer Science and Engineering, South China University of Technology, Guangzhou 510641, China

Author Benefits

Open Access:
free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:
indexed within Scopus, ESCI (Web of Science), dblp, Inspec, Ei Compendex, and other databases.

Journal Rank:
JCR - Q1 (Computer Science, Theory and Methods) / CiteScore - Q1 (Computer Science Applications)
