Message from the Guest Editor

The aim of this Special Issue is the better understanding of the potential industrial significance of chemical engineering. The Special Issue will cover all of the basic areas of chemical engineering, including catalysis, environmental engineering, energy, biotechnology, polymers, materials, process systems, transport, industrial chemistry, separations, and multidisciplinary. In addition to traditional subjects, papers dealing with new areas of science and technology that fit the broad scope and objectives of the journal are encouraged. My aim is to encourage scientists and engineers to publish their experimental and theoretical results in as much detail as possible. Therefore, there is no restriction on the length of the papers. The types of articles to be published include original articles, editorials, case reports, reviews, short communications, and letters to the editor.
