Functional Materials for Renewable Energy Technologies

Guest Editors:

Dr. Jacek B. Jasinski

Conn Center for Renewable Energy Research, University of Louisville, Louisville, KY 40292, USA

Dr. Dominika Ziółkowska

Faculty of Chemistry, University of Warsaw, Pasteura 1, 02-093 Warsaw, Poland

Deadline for manuscript submissions: closed (28 May 2019)

Message from the Guest Editors

Dear Colleagues,

In recent years, growing energy demands, along with increasing concerns of environmental pollution, excessive greenhouse gas emissions, and accelerating global warming, have drawn significant attention towards renewable energy technologies. Substantial progress has already been achieved in this field, thanks to the research and development of functional materials that enable costeffective, durable, and highly-efficient renewable energy conversion and storage. However, this is an ongoing effort, as more work is needed in the discovery of new and improvement of existing materials, to enable large-scale, economically viable deployment of such devices and technologies.

This Special Issue covers topics of functional materials for various renewable energy technologies, including:

- batteries and supercapacitors
- organic and inorganic photovoltaics
- water splitting and photocatalysis
- solar fuels and fuel cells
- thermal and mechanical energy harvesting
