Advances in Renewable Energy Derivatives

Message from the Guest Editors

Energy and high-energy chemicals are vital for sustainable life and economic growth. Currently, fossil-derived energy components are overwhelming this market. However, rapid research progress can be witnessed in renewable systems focusing on sustainable and efficient energy supply and derivatives. The production of syngas, high-energy chemicals, energy storage devices, and direct energy from biomass and residues (agro, forests, municipal, and industrial) interests researchers. The commercial development in these sectors will help meet the global energy demands and mitigate the increasing environmental concerns.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Mario J. Muñoz Batista

Department of Chemical Engineering, Faculty of Sciences, University of Granada, Avda. Fuentenueva, s/n, 18071 Granada, Spain

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Chemical) / CiteScore - Q1 (General Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 29.6 days after submission; acceptance to publication is undertaken in 5.7 days (median values for papers published in this journal in the first half of 2025).
