## **Special Issue**

# Bio-Processing and Biochemical Engineering 2021

## Message from the Guest Editor

Lignocellulosic biomass bioenergy production is considered to be a promising alternative energy source in order to minimize reliance on limited fossil sources, greenhouse gas emissions, and environmental pollutions. The versatility of lignocellulosic feedstocks to be processed into value-added products, combined with a valuable opportunity to maximize their returns from crops, presents an important research topic. We would like to invite submissions to this Special Issue, addressing this above-mentioned area of research. Potential research topics include, but are not limited to, biological materials processing; process engineering for food, biofuels and bioproducts, renewable materials, bio-based product quality assessment, biomaterials, and biochemical catalysts; and value-added processing for agriculture, food systems, natural resources, and potential crops.

## **About the Journal**

## Message from the Editor-in-Chief

#### **Editor-in-Chief**

Prof. Dr. Mario J. Muñoz Batista

Department of Chemical Engineering, Faculty of Sciences, University of Granada, Avda. Fuentenueva, s/n, 18071 Granada, Spain

### **Author Benefits**

## **High Visibility:**

indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Engineering, Chemical) / CiteScore - Q1 (General Engineering)

## **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 29.6 days after submission; acceptance to publication is undertaken in 5.7 days (median values for papers published in this journal in the first half of 2025).
