

Special Issue

Bio-Processing and Biochemical Engineering

Message from the Guest Editor

A plentiful availability of lignocellulosic materials encourages the production of numerous commodities and applications to foods, chemicals, textiles, and biofuel sources. The versatility of lignocellulosic feedstocks to be processed into value-added products combined with a valuable opportunity to maximize their returns from the crops presents an important research topic. We would like to invite submissions to this Special Issue of *ChemEngineering* addressing this abovementioned area of research. Potential research topics include, but are not limited to, biological materials processing; process engineering for food, biofuels and bioproducts, renewable materials, bio-based product quality assessment, biomaterials, and biochemical catalysts; and value-added processing for agriculture, food systems, natural resources, and potential crops.

Guest Editor

Dr. Daehwan Kim

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Mario J. Muñoz Batista

Department of Chemical Engineering, Faculty of Sciences, University of Granada, Avda. Fuentenueva, s/n, 18071 Granada, Spain

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Chemical) / CiteScore - Q1 (General Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 29.6 days after submission; acceptance to publication is undertaken in 5.7 days (median values for papers published in this journal in the first half of 2025).
