# Advances in Metal-Based Catalysts

### Message from the Guest Editors

Whether precious or non-noble, metals and their derived compounds—such as oxides, carbides, phosphides and nitrides—nowadays occupy a major role in a wide variety of catalytic processes. Their role as an active phase, supported or not on the surface of very different materials, has been extensively discussed but remains a subject of major concern, and new investigations are opened each day in order to find new metal-support or metal-metal combinations leading to improved catalytic performance. The current Special Issue aims to gather the most innovative research on metal-based catalysts for any relevant catalytic process. Contributions on novel formulations, preparation procedures, detailed studies of durability and catalyst deactivation, as well as original pathways for the utilization of metal-containing catalysts, such as photo and/or electro-catalysis, will be welcomed.

#### Author Benefits

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

##### Journal Rank:

JCR - Q2 (Engineering, Chemical) / CiteScore - Q1 (General Engineering )

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 29.6 days after submission; acceptance to publication is undertaken in 5.7 days (median values for papers published in this journal in the first half of 2025).
