

Special Issue

Novel Photocatalysts for Environmental and Energy Applications 2021

Message from the Guest Editor

Recently, numerous photocatalyst materials have been studied for their remarkable applications in photocatalytic degradation of toxic pollutants, photocatalyst adsorbents for wastewater treatment, hydrogen production, conversion of solar energy into electric energy, and reduction of CO₂ to organic fuels (e.g., methane, methanol, formate, or carbon monoxide). This Special Issue is dedicated to a wide range of strategies that are used due to the free availability of solar radiation and its significant benefits in terms of several applications, such as environmental remediation, synthesis of chemicals, green energy generation, and energy storage. This covers the design, preparation, and characterization of novel photocatalytic materials produced through cost-effective and fully scalable synthesis approaches with controllable dimensions and properties suitable for a wealth of applications in photocatalysis and energy. The synthesis of novel materials with a set of unique and exclusive advantages, such as high catalytic activity, impressive selectivity, long-term durability, and environmental sustainability, are of profound and immediate interest.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Mario J. Muñoz Batista

Department of Chemical Engineering, Faculty of Sciences, University of Granada, Avda. Fuentenueva, s/n, 18071 Granada, Spain

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Chemical) / CiteScore - Q1 (General Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 29.6 days after submission; acceptance to publication is undertaken in 5.7 days (median values for papers published in this journal in the first half of 2025).
