

Special Issue

Newborn Screening for Classical Homocystinuria

Message from the Guest Editor

The goal of this Special Issue is to highlight the impact of NBS on HCU. It will focus on: (a) long term outcomes of patients with HCU detected through NBS; (b) the impact of the use of different NBS markers (methionine v. homocysteine) in detecting—or failing to detect—individuals with HCU; (c) impact of pilot programs using homocysteine on detection of B6-responsive cases, a heretofore under-detected and hence under represented group in previous reports; (d) the effects of different screening approaches in different countries. We hope that this Special Issue will encourage experts to share their experience and lead to more effective newborn screening for this rare disorder.

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed,
PMC, Embase, and other databases.

Journal Rank:

JCR - Q1 (Pediatrics) / CiteScore - Q1 (Pediatrics,
Perinatology and Child Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 26.1 days after
submission; acceptance to publication is undertaken in 3.9
days (median values for papers published in this journal in
the first half of 2025).
