

Special Issue

Newborn Screening and Follow-Up Diagnostic Testing for Krabbe Disease

Message from the Guest Editors

This Special Issue on newborn screening for Krabbe disease in the *International Journal of Neonatal Screening* will focus on state-collected newborn screening data and short- and long-term follow-up of newborns identified with early or possible late onset forms of KD. It will also provide insight into the genetic and pathophysiological underpinnings of Krabbe disease. The following topics could be interesting for the reader.

- State-wide newborn screening for Krabbe disease algorithms/testing/outcome reports.
- Genotype data for newborns identified with Krabbe disease and possible KD.
- Use of psychosine as a second-tier test.
- Long-term follow-up of newborns identified with possible late onset KD.
- Challenges for programs.

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed,
PMC, Embase, and other databases.

Journal Rank:

JCR - Q1 (Pediatrics) / CiteScore - Q1 (Pediatrics,
Perinatology and Child Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 26.1 days after
submission; acceptance to publication is undertaken in 3.9
days (median values for papers published in this journal in
the first half of 2025).
