Message from the Guest Editors

Dear Colleagues,

In recent years, bioengineering and biosciences coupled with various pioneering technologies have achieved promising advances in the biomedical field. In this context, we are pleased to announce the launch of a Special Issue titled ‘Frontiers in Biomedical Engineering’. The focus of this Special Issue is on covering state-of-the-art research across multiple biomedical disciplines, which can be beneficial in disease diagnosis, treatment planning, surgical navigation, and simulation of the biomechanics of the human body.

The topics of interest include, but are not limited to, the following application fields for machine learning:

- Biomechanics;
- Artificial Organs;
- Medical Simulation and Devices;
- Computational and Finite Element Modeling (FEM);
- Wearable Sensors;
- Biomaterials;
- Medical Implants;
- Bioinformatics.

We look forward to receiving your excellent work.
