Message from the Guest Editors

Dear Colleagues,

Big data approaches in an open innovation environment may enable the flows of knowledge and external cooperation at many different levels. The increasing availability of open and big data sources of information has drawn attention to the different research methods that can be used to extract useful information and support the creation of innovative solutions.

This Special Issue will present some of the most recent advances in the application of big data-related research methods to different fields of social sciences. Suitable topics include, but are not limited to, the following:

Open and big data sources in economics and social sciences

Big data solutions in innovation systems

Internet and big data applications to innovation systems:

Prof. Dr. Josep Domenech

Prof. Dr. María Rosalía Vicente
