Special Issue

Acoustics, Speech and Signal Processing

Message from the Guest Editors

Engineers and scientists have been studying the phenomenon of speech communication (even before Alexander Graham Bell's revolutionary invention) with an intent to develop more efficient and effective human-to-human and human-to-machine communication systems. Although digital signal processing took the center stage in speech communication research in the 1960s, it is still critical for exploiting the gains of decades of research. Artificial intelligence has greatly influenced speech processing during the last decade, with much research improving the performance of acoustics and speech processing systems. Therefore, this Special Issue focuses on recent state-of-the-art techniques for improving acoustic and speech signal processing using digital signal processing techniques and/or artificial intelligence techniques. Papers submitted to this Special Issue will be judged on the importance of the problem, originality of the solution, and contribution toward the existing body of knowledge.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Jian Kang
UCL Institute for Environmental Design and Engineering, The Bartlett,
University College London, London WC1H 0NN, UK

Author Benefits

Open Access:
free for readers, with article processing charges (APC) paid
by authors or their institutions.

High Visibility:
indexed within ESCI (Web of Science), Scopus, and other
databases.

Journal Rank:
CiteScore - Q2 (Acoustics and Ultrasonics)
