

Special Issue

Recent Developments in Ultrasound Applications

Message from the Guest Editor

Ultrasound is a rapidly evolving technology with a multitude of recent applications due to recent advances in material technology. This recent ultrasonic technology developments include: i) new materials and components; ii) wave propagation and associated phenomena; and iii) types of measuring techniques. These new ultrasound applications can be divided into low- and high-intensity groups (i.e., power, energy or amplitude). Usually, low-intensity applications using both low and high frequencies are used in NDT, while high-intensity applications using both low and high frequencies are used in cleaning operations associated with sono chemistry. In this Special Issue of *Acoustics*, we are soliciting manuscripts on recent advances in ultrasound technology.

- Piezo crystals
- High frequency
- High intensity
- Sono chemistry
- Ultrasound
- Wave propagation
- NDT

Guest Editor

Prof. Dr. Jay N. Meegoda

Department of Civil and Environmental Engineering, New Jersey
Institute of Technology, Newark, NJ 07102, USA

Deadline for manuscript submissions

closed (30 June 2023)

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Jian Kang

UCL Institute for Environmental Design and Engineering, The Bartlett,
University College London, London WC1H 0NN, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, and other databases.

Journal Rank:

CiteScore - Q2 (Acoustics and Ultrasonics)
