

Special Issue

Active Control of Sound and Vibration

Message from the Guest Editors

The history of active sound and vibration control technology can be dated back to its first documented attempt in the 1930s. It first became a popular research area in 1990s, during that period, enormous studies were carried out. After a one-decade "cooled-down" period, active sound and vibration control have recently reclaimed its research popularity. This is not only driven by the even wider range of application and commercialization potentials of this technology brought by the recent rocketing in the computing power of signal processing hardware together with its cost drop, but also by the unprecedented potential research outcomes if the recent research breakthroughs in other widely studied areas, can find their ways in benefiting active control of sound and vibration. This special issue welcomes submissions of recent research work, which include algorithm development, system modeling, physical mechanisms, review/tutorials, hardware and software, new sensing and computing technologies, engineering applications.

Guest Editors

Dr. Yangfan Liu

School of Mechanical Engineering, Purdue University, West Lafayette, IN 47907, USA

Prof. Dr. Woon-Seng Gan

School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore, Singapore

Deadline for manuscript submissions

closed (25 June 2024)

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Jian Kang

UCL Institute for Environmental Design and Engineering, The Bartlett,
University College London, London WC1H 0NN, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, and other databases.

Journal Rank:

CiteScore - Q2 (Acoustics and Ultrasonics)
