

Special Issue

Actuators for Identification, Vibration Analysis, and Control of Mechatronic Systems

Message from the Guest Editor

It is well-known that the design of innovative strategies for efficient operation, robust control, effective suppression of undesirable oscillations and real-time identification for modern mechatronic systems, as well as for their multiple components, involves several open and challenging research topics. This Special Issue aims to present recent and innovative contributions on modeling, system identification, vibration analysis, diverse automatic control design methodologies and applications of actuators for a wide variety of recent mechatronics systems, including their electric, electronic and mechanical components and software engineering. Thus, in this context, we welcome important recent contributions related (but not limited) to modeling, vibration control, system identification, vehicle suspensions, collaborative robotic systems, autonomous aerial and underwater vehicles and other experimental and theoretical results in this very broad matter, where the science and technology of actuators and control systems play a relevant role.

About the Journal

Message from the Editorial Board

We are just entering the Next Wave of Technology (NWT) where actuators will play the same role as the computer chip did for computers/social media approximately four decades ago. Just in the U.S., production of \$1 trillion year of electromechanical systems (vehicles, orthotics, manufacturing cells, freight trains, aircraft, etc.) will be impacted by the NWT, all driven by actuators. Five key trends can be found for the future perspectives: “Performance to Reliability”, “Hard to Soft”, “Macro to Nano”, “Homo to Hetero” and “Single to Multi functional”. We invite papers that primarily impact these economic sectors; those illustrating basic scientific principles are also welcome.

Editors-in-Chief

Prof. Dr. Kenji Uchino

Electrical Engineering, Emeritus Academy Institute, Pennsylvania State University, University Park, PA 16802, USA

Prof. Dr. Norman M. Wereley

Department of Aerospace Engineering, University of Maryland, 3179J Martin Hall, College Park, MD 20742, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within SCIE (Web of Science), Scopus, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Mechanical) / CiteScore - Q1 (Control and Optimization)
