Message from the Guest Editors

Dear Colleagues,

In answering to the challenge of the COVID-19 pandemic, knowledge asset dynamics play a crucial role. In this line, we welcome submissions, both conceptual and empirical, from a variety of disciplines, perspectives, and methodological approaches. Topics of this Special include (but are not restricted to) the following:

- Historical antecedents in the interplay between knowledge, resilience, and socio-economic transformation;
- Black swans, knowledge asset dynamics, and resilience;
- Interplay between dynamic capabilities and transformative resilience;
- Knowledge exploration, social innovation, and resilience;
- Knowledge-building processes and sensemaking during crises;
- Designing resilience during systemic shocks;
- The role of companies, institutions, and decision makers in reinforcing and/or balancing systems' resilient behaviors;
- Resilience between the exploitation and exploration of knowledge;
- Implementing resilient policies and intervention strategies to address first-order and second-order change.
