Ethical Decision-Making Processes in Organizations and Public Administration

Message from the Guest Editor

In reaction to recent corporate ethical scandals, nowadays, dominant public expectations and pressures are that organizations should be accountable for the ethicality of their internal and external processes, including relations with all stakeholders. These expectations extend to the public services, leading people to ask for a higher level of transparency in decision processes affecting collective life. An enormous growth of research in the field of organizational ethics in the last decade has highlighted issues such as the influence of ethical infrastructures and leadership on the behavior of individuals in organizational context. However, the major challenge in this research field will continue to be getting a better understanding of how individuals and groups detect, judge and incorporate ethical issues into their decision-making processes. This Issue represents an opportunity for scholars and practitioners from a large spectrum of disciplines to disseminate their work on ethical decision making processes in public administration and organizational contexts. António Caetano Eduardo Simões

About the Journal

Message from the Editor-in-Chief

Welcome to *Administrative Sciences*, the journal aims to advance and communicate knowledge concerning management theory and practice both in public administration and in profit organizations; it encourages submissions that build on interdisciplinary research in related fields, such as business, economics, political science, gender studies, psychology, sociology, physiology, communication theory or artificial intelligence and their implications on management, organizations and the society. Join us on a journey through the *Administrative Sciences*, where management merges with innovation.

Editor-in-Chief
