Special Issue

Applied Aeroelasticity and Fluid-Structure Interaction

Message from the Guest Editors

Towards green aviation, new aircraft configurations are being developed with reduced structural weight and higher energy efficiency. As a result, modern aircraft possess a high level of flexibility to satisfy maneuverability requirements. Aeroelastic instabilities and responses can severely affect the flight performance and limit the flight envelope of these new aircraft configurations. Similar aeroelastic phenomena may also arise in modern turbomachines and wind turbines. Thus, there is a strong need in the aerospace industry and fluid engineering to predict and simulate aeroelastic, and in general, fluid-structure interactions. Like other areas in science and technology, experimental aeroelastic methods are consistently advancing. While improved low-order linear modelling methods are still commonly used for industrial design, high-order methods are becoming more attractive than in the past. This is because the methods based on the Euler and Navier-Stokes equations can model nonlinear transonic and viscous (Navier-Stokes) effects more accurately.

About the Journal

Message from the Editor-in-Chief

You are welcome to contribute a research article or a comprehensive review for consideration and publication in *Aerospace* (ISSN 2226-4310), an on-line, open access journal.
Aerospace adheres to rigorous peer-review as well as editorial processes and publishes high quality manuscripts that address both the fundamentals and applications of aeronautics and astronautics. Our goal is to enable rapid dissemination of high impact works to the scientific community.

Editor-in-Chief

Prof. Dr. Konstantinos Kontis
School of Engineering, University of Glasgow, James Watt Building South, University Avenue, Glasgow G12 8QQ, Scotland, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Aerospace) / CiteScore - Q2 (Aerospace Engineering)
