Message from the Guest Editors

As the agricultural industrial chain has been extended, the energy consumption and carbon emissions of the entire agricultural system have been increasing, which cannot be ignored. The overall adjustment of the agricultural production mode and structure can reduce the number of carbon emission sources, and significantly increase the carbon sink in the process of agricultural production. Therefore, it is of great practical significance to study the impact of energy innovation and low-carbon policies in the agricultural sector on global environmental efficiency. The gradual realization of carbon neutralization within agriculture and rural areas would contribute greatly to global carbon neutralization.

This Special Issue focuses on the role that energy economics and low-carbon policies of the agricultural sector play in the process of global carbon neutralization over time. We welcome highly interdisciplinary quality studies from disparate research fields, including energy economics and low-carbon policies of the agricultural sector, agricultural environmental efficiency calculation and modeling, rural green development, carbon finance, climate change risk prevention, etc.
Agriculture is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q2 (Plant Science)
