### Message from the Guest Editor

Dear Colleagues,

Integrated Pest Management (IPM) has been developed as an alternative to the widespread use of chemical pesticides for controlling pests in agrosystems. Based on the harmonized and strategic use of different tactics (biological, cultural, physical, etc.) to be combined with chemical control, it aims at maintaining pest populations below the economic damage thresholds, while reducing secondary effects on the environment, as well as on plant, animal and human health.

This Special Issue intends to assess the status of IPM techniques, especially in the frame of climatic dynamism and global movement of organisms which are improving pest problems. It also gives an overview on advances in integrated strategies for controlling pests in the major agricultural crops, both grasses and trees. I would like to invite all of you studying IPM in agricultural systems, in different countries and regions, to contribute to this Special Issue. Both original research and reviews are welcome.

Prof. Dr. Carmelo Rapisarda

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
