

Livestock Farm and Agribusiness Management

Guest Editor:

Dr. Peter Tozer

Institute of Agriculture and
Environment, Massey University,
4472 Auckland, New Zealand

Message from the Guest Editor

The management of livestock production systems has faced numerous challenges, environmental, economic, and social, to ensure that the systems are sustainable while still fulfilling their purpose of the provision of services to society.

Deadline for manuscript
submissions:

closed (10 August 2021)

This Special Issue will focus on the challenges facing managers of livestock production agribusinesses, from the large commercial scale down to the small scale, including subsistence production systems, and how these challenges can be overcome with changes to management through technology, practices, or skills. The application of these will lead to more productive, environmentally friendly, and economically and socially sustainable production systems and to improve the quality and safety of products from these systems.

Research on livestock production systems and agribusinesses that addresses the challenges of managing these systems is welcome. The Special Topic issue is not limited by species or geography, studies submitted can cover any livestock species, including but not limited to beef cattle, dairy cattle, sheep, goats, pigs, equine, or poultry.

an Open Access Journal by MDPI
