### Message from the Guest Editor

This issue is dedicated to the role of weeds in cropping which is altered in one or several of these approaches to diversification. The effects of weeds in diversified cropping needs better understanding, including environmental conditions and field management practices as they directly or indirectly impact diversification goals. Cropping system conditions, soil fertility, fertilization, irrigation, pest control, the possibility for the use of the crop, and the effects of weeds on following crops can be addressed. Studies from a producer, consumer, or public stakeholder perspective about perceptions, interest, and marketing of products from diversified cropping including weeds are most welcome.

This Special Issue focuses on the role of weeds in cropping. Crop stands are either diversified with other crops or with companion plants; both can be mixed on various spatial scales. Major emphasis is on the double-sided effect of weeds—pro biodiversity, con productivity. This issue will lead to studies embracing disciplines ranging from agronomy, horticulture, viticulture, botany, and ecology to landscape ecology and socio-economics.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
