submissions:

**closed (15 August 2021)**

### Message from the Guest Editors

For farmer-growers, the road to market can be complex as their produce moves through the food value chain to the final consumer. The resilience of food chains to environmental, economic, societal, geo-political, pandemic, and climaterelated weather shocks are key determinants of the food and nutrition security for modern societies. The relationships between the major actors in supply chains determines the share of the value of the final product that the farmer-grower and the other actors receive. Fairness, as an outcome in the distribution of value, and as a set of processes in how the distribution is determined, has attracted the attention of policy-makers. Scientific studies are sought for publication in this Special Issue of *Agriculture* that provide theoretical approaches and tools for analysis, including methodologies for measurement and modeling, to improve the understanding of the dynamics of food value chains, to enhance their resilience, fairness, and sustainability.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
