Biostimulants Extracted from Biomass for Better Crop Growth

Message from the Guest Editors

The use of biomass extracts in agriculture is considered a sustainable approach to enhance crop growth and resilience. Traditionally derived from plant, algal, or microbial sources, these natural products, also defined as biostimulants, have gained renewed interest due to their potential to reduce the reliance on synthetic chemicals and improve plant tolerance to abiotic stresses such as drought, salinity, and temperature extremes. We welcome original research articles, reviews, and case studies that explore the mechanisms through which biomass extracts influence plant physiological processes, nutrient uptake, and overall yield. Emphasis will be placed on studies that demonstrate the role of these products in mitigating abiotic stresses, enhancing crop quality, and promoting sustainable agricultural practices. Papers that investigate innovative extraction methods, formulation improvements, and field application strategies are also highly encouraged.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
