Soil Health and Microbiomes: A One Health Approach to Sustainable Crop Productivity and Ecosystem Resilience

Message from the Guest Editors

The interconnectedness of soil health, microbiomes, and symbiotic relationships underpins the foundation of sustainable agriculture, essential for meeting global food demands while preserving ecosystem integrity. Healthy soils not only support crop productivity but also promote nutrient cycling, water retention, and a diverse microbial community. Advances in the understanding of plant–microbe and soil–microbiome interactions offer transformative opportunities to improve agricultural systems, mitigate climate change impacts, and address challenges such as soil degradation and food security. This Special Issue highlights innovative strategies that integrate soil microbiome management and symbiotic relationships, such as those between plants and nitrogen-fixing bacteria or mycorrhizal fungi, to promote sustainable nutrient management and reduce dependence on synthetic inputs. A particular focus is given to contributions exploring the role of soil health within the broader One Health framework, highlighting how agricultural practices affect human, animal, and environmental health.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
