Latest Research on Multiple Stress Tolerance in Maize

Message from the Guest Editors

Maize is one of the most important crops. Maize production is affected by various abiotic and biotic stressors worldwide. Stresses of various environmental and biotic natures have a significant impact on the physiological processes and parameters, as well as the development dynamics of maize and, on the quantity, quality, and stability of yields due to changing climatic conditions. Soil–plant interactions and the complex nutrient and water use are the main factors that determine plant health. The increased stress tolerance of new genotypes, technological improvements, and breeding results will facilitate the successful implementation of climate-adaptive farming. Altogether, stress tolerance is a complex parameter in plants. The improvement of tolerance to single or multiple stress factors may be rooted in various scientific areas, ranging from the molecular level to different crop production techniques, resulting in a complex research topic. Manuscripts focusing on climate adaptive agriculture and early stress detection, as well as mitigation and stress tolerance improvements of laboratory and field experiments, are invited for submission.

Guest Editors

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
