

## Special Issue

# Unintentional Effects of Pesticide Usage in Non-Target Species

### Message from the Guest Editors

Insecticides are the predominant weapon to protect crops, killing or preventing insects from engaging in destructive behaviors. But once used to fight pests, insecticides may accidentally expose non-pest species, for instance, by contaminating soil and water. They may harm agriculture by contributing to the demise of key pollinator species. This Special Issue focuses on the unintentional effects of pesticide usage on non-pest species. It will fully embrace studies from multiple disciplines (e.g., agricultural sciences, toxicology, genetics and molecular biology, ecology, behavior, and evolution) that examine accidental pesticide impacts extending from the molecular to the behavioral level. Impacts may include, for instance, damage to organelles, cells, or tissues that are not primary targets and may include changes ranging from gene expression level to mating and sleeping patterns of non-target organisms. Studies may investigate pesticides' novel mechanisms of damage at label-recommended doses or sublethal doses that ultimately affect the biology of non-pest species. All types of articles, such as original research, opinions, and reviews, are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
