

Special Issue

Molecular Genetics and Biotechnology of Crop Breeding

Message from the Guest Editors

A number of QTLs/genes for important traits including complex traits have been identified through QTL interval mapping/ GWAS and also successfully utilized in molecular breeding to improve the particular crop. Further, the utilization of omics approaches such as transcriptomics, metabolomics, proteomics, and genomics has accelerated functional genomics studies, leading to an increased understanding of the molecular mechanism of trait variation at the genome-wide level. The comparative genomics approach has facilitated the identification of important genes in orphan crops using information available in model plates. These candidate genes can be functionally characterized using molecular tools and can be utilized in breeding programs. The current Special Issue focuses on the advancement in the existing knowledge of different molecular tools, genomic information, genes/QTLs identification, and molecular breeding techniques in all crops of importance. We welcome submissions of the original papers or reviews in the mentioned area.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
