Special Issue

Utilisation of Edible Insect Rearing Products and By-Products with a Sustainability and Circular Bio-Economy View

Message from the Guest Editor

The ever-increasing world population and the consequent increase in the global need for protein make it necessary to search for new protein sources that, while not replacing the current ones, represent a viable alternative. In addition, the production of less anthropogenic waste, or at least a more sustainable valorisation of the waste, has become an urgent challenge for the world of research, which must quickly propose viable solutions with low long-term impacts. The goal of the Special Issue is to publish high-quality scientific articles dealing with new perspectives on the use of edible insect rearing products and by-products. We invite you to submit your scientific research results, in the form of original articles, communications or reviews on (i) the use of edible insect farming direct or indirect products and by-products; (ii) innovative and sustainable protocols for obtaining powder or other byproducts from edible insects; (iii) new perspectives on the use of edible insect farming by-products for animal or human nutrition; and (iv) environmental, economic or social impacts of even partial substitution of currently used products for edible insect rearing by-products.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. Agriculture is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

Editor-in-Chief

Prof. Dr. Les Copeland

Sydney Institute of Agriculture, School of Life and Environmental Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
