

## Special Issue

# Effects of Invasive Plants on Soil

### Message from the Guest Editors

Biological invasions are a global consequence of an increasingly connected world, environmental change, and an increasing human population. Non-native species have direct and indirect impacts on ecological processes and soil nutrient status, which can influence feedback loops affecting plant growth and facilitate biological invasions in different ecosystems, thereby contributing to their spread across the landscape. Therefore, further research is needed to provide basic information for the comprehensive evaluation of the impact of alien plant invasion under the background of change in the soil environment, assess the damage of invasive plants to the structure and function of different ecosystem, and identify the ecological management of invasive plants, as well as early warning signs and means of prevention. This Special Issue aims to provide an in-depth analysis and comprehensive overview of a comprehensive evaluation of the impact of alien plant invasion under the background of climate change

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

---

### Editor-in-Chief

Prof. Dr. Les Copeland  
Sydney Institute of Agriculture, School of Life and Environmental  
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
