

## Special Issue

# Effects of New Types of Fertilizers on Soil and Crop Physiological Quality

### Message from the Guest Editor

New types of fertilizers include nano-fertilizers, stable synergistic fertilizers, long-term controlled release fertilizers, microbial fertilizers, microbial inhibitors, and other green intelligent fertilizers, which have the advantages of stability, low dosage requirements, slow release, long-lasting efficacy, sustainability, multifunction responses, etc. Therefore, the application of new types of fertilizers can not only enhance crop growth and improve yield and nutritional quality but also mitigate the risk of carbon release while promoting environmental protection and sustainable green development.

This Special Issue focuses on the development and application of new types of fertilizers and their effects on the cycling of soil nutrients, soil microbial processes, and the physiological processes influencing crop yield and quality formation. Moreover, it seeks to promote interdisciplinary investigations encompassing chemistry and engineering disciplines in material synthesis, biology studies in crops, as well as regulatory mechanisms. Original research articles and reviews are accepted.

## About the Journal

### Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
